## **Pilot Actions Report**

Status: F

(D-Draft, FD-Final Draft, F-Final)

Dissemination level: PU

(PU – Public, PP – Restricted to other programme participants, RE – Restricted to a group specified by the consortium,CO – Confidential)

Author:
Neville Slack, Centre for Process Innovation, UK
Contributes:
UNIDO- ICHET (Turkey)
Environment Park (Italy)
WBZU (Germany)
FHa & FSV (Spain)
Author is the contact person for this document.

Date of this document:

December 2012

## **Table of contents**

## 1 Objectives of the report

The objective of this report is to review the pilot actions which were carried out by project partners INTERNATIONAL CENTRE FOR HYDROGEN ENERGY TECHNOLOGIES (UNIDO-ICHET) in Turkey, ENVIRONMENT PARK in Italy, WEITERBILDUNGSZENTRUM BRENNSTOFFZELLE ULM E.V (WBZU), Germany and FOUNDATION for HYDROGEN in ARAGON (FHa) / FUNDACIÓN SAN VALERO (FSV), Spain.

The previous report D10 'The development of selected training initiatives in the field of Hydrogen and Fuel Cells' reviewed a number of proposals and initiatives which were put forward by the project partners and from hese the pilot actions were carried out.

The D11 Pilot Action report includes brief background information of the organisation a review of the pilot actions together with the respective completed questionnaires (Appendices 5.1, 5.2, 5.3, 5.4), together with specific photographs from the pilot studies (Appendices 5.5, 5.6, 5.7, 5.8).

The report highlights the success of these pilot actions which in total were attended (both physically and virtually) by over 350 students.

Feedback (via the feedback questionnaires) from the students showed that the courses were of interest specifically the knowledge attained, the practical application and the potential for future career development.

## 2 Method used

For this report important information was taken from the previous deliverable D10 'Report on the development of selected training initiatives in the field of Hydrogen and Fuel Cells in order to develop and deliver a number of pilot actions based on the vocational training of hydrogen and fuel cell technologies. The designed feedback questionnaire from D10 was used in the four pilot actions in order to obtain specific comments on the pilot action content and methods of delivery.

### 3 Pilot Actions

#### 3.1 Pilot Action - UNIDO-ICHET

The International Centre for Hydrogen Energy Techndogies (ICHET) is a project of the United Nations Industrial Development Organization (UNIDO) founded in Istanbul in 2004 and supported by the Turkish Ministry of Energy and Natural Resources (MENR). Its role is to support, demonstrate and promote viable hydrogen energy technologies with the aims of enhancing future economic development, particularly in emerging countries, and of preventing the widening of the energy and technology gap while helping skipping over the fossil fuel phase.

UNIDO-ICHET carried out a 2 day pilot study on at UNIDO-ICHET facilities Turkey on the 8<sup>th</sup> and 9<sup>th</sup> October targeting Alternative Fuel and Renewable Energy Departments at Vocational Schools in Turkey.

#### Rational & Objectives:

Hydrogen technologies in the market place are still in small numbers and further infusion into common life require knowledge base and understanding at all public levels. There is a need for fundamental education of students, technicians and engineers about what these systems are and how to integrate them.

- Principles of electrochemistry and hydrogen
- Hydrogen production, storage, distribution and utilization technologies
- Laboratory experience with hydrogen and fuel celltechnology
- Equipment, vehicles and their integration

Ten schools from eight different cities participated in the activity, these included the following:

School	City/Town	Student numbers
Can vocational school	Canakkale	7
Erciyes University vocational school	Kayseri	6
Dokuz Eylul University vocational school	Izmir	4
Erzincan University vocational school	Erzincan	4
Duzce University vocational school	Duzce	4
Izmir Economy University	Izmir	3
Yildiz Technical University Vocational School	Istanbul	7
Okan University	Istanbul	7
Eskisehir Technical and Industrial High School	Eskisehir	3
Ministry of Energy, Renewable Energy Division	Ankara	2
Total		47

#### Outline of pilot action:

#### Results:

In two days, 47 people were trained, so it means, 19 person/week.

The feedback questionnaires from this pilot action together with photographs can be found is Appendices 5.1 and 5.5.

#### **Conclusions:**

The vast majority of the students who attended the pilot action believed the training had reached its purpose. With the most interesting and beneficial parts being the 'Hand-on' training and the fuel cell vehicles. The least beneficial part of the training being the presentation on fuel cells. All in all students considered that they were much more knowledgeable and better trained afterwards.

#### 3.2 Pilot Action - Environment Park

In an area where there are major production centres of knowledge and an industrial structure characterised by many small and medium-sized enterprises, the role of Environment Park is to stimulate and collect the demand for innovation by promoting project initiatives that involve the Piedmont academia, research centres, technology parks and innovation centres. Environment Park is divided into two business units, which are dedicated to property management to the complex and 'research and innovation'. The business unit dedicated to the research has historically developed around the concept of eco-efficiency, with a typical cross-sectional approach to the environment.

Environment Park carried out a pilot study at Environment Park 'Hysylab' facilities Italy on the 11<sup>th</sup> December 2012 targeting vocational training of technical students involved on industrial & energy sectors.

#### Rational & Objectives:

Educational action focused on vocational training students, technical staff from industry and teachers of every school. Training courses and workshops to graduate students about hydrogen technologies, hydrogen production, storage, safety, fuel cell technologies and system integration.

- Production of hydrogen
- Storage of hydrogen
- Fuel cell fundamentals
- Application of fuel cells (UPS, micro CHP....)
- Safety
- Fuel cell technologies & system integration

#### Practical test activities:

- Polarisation curves on single cell
- Polarisation curves on fuel cell stack
- Test of a 10 kWe natural gas reformer
- Adsorption/desorption test on metal hydride

For this pilot action there were a total of 70 students from the industrial and energy sectors.

#### Results:

In one day, 70 people were trained, so it means, 14 person/week.

The feedback questionnaires from this pilot action together with photographs can be found is Appendices 5.2 and 5.6.

#### **Conclusions:**

The pilot action was based on theory and practical activities creating a real physical contact with the fuel cell technology. It also gave the students the opportunity to gain 'hands-on' activities on fuel cells. There was also a notable acknowledgement by the students on the future potential of this technology with a view to its implementation and with that potential career opportunities.

#### 3.3 Pilot Action – WBZU

The Fuel Cell Education and Training Centre Ulm (WBZU) is a registered non-profit society with well-known partners from industry, trade, universities and research-centres. The focus of the centre is to offer information and training courses concerning fuel cells and hydrogen. The courses are especially adapted for technicians, engineers, scientists and students. To ensure hands on technology and practical training, different fuel-cell testing systems und demonstration units are featured in the new building of the WBZU-society. The centre opened in 2004.

WBZU carried out pilot studies at WBZU facilities Ulm Germany on the 8<sup>th</sup> & 9<sup>th</sup> November and 22<sup>nd</sup> & 23<sup>rd</sup> November 2012 targeting vocational training in the fields of fuel cells and hydrogen, the training was structured to ensure that no prior knowledge of electrochemistry or fuel cell technology was required.

#### Rational & Objectives:

- Basics and fundamentals of PEFC and Hydrogen technologies
- Polymer electrolyte Fuel Cell applications
- Hydrogen system and infrastructure
- Hydrogen handling safety aspects

#### Outline of pilot action:

Fuel cell & hydrogen electrochemical	Porous media
fundamentals	
Fundamentals of Electro catalysis	Lifetime aspects of PEFC
Hydrogen safety aspects	Fuel cell systems
Components & design of a fuel cell stack	Fuel reforming and applications
Basic fuel cell stack testing	Practical training on various fuel cell
Extended stack characterisation	systems

For these pilot actions there were a total of 38 students for the 8-9<sup>th</sup> November 2012 training and a total of 18 for the 22-23<sup>d</sup> November 2012 training these were all from the vocational Robert-Bosch school Ulm, Germany.

#### Results:

In two days, 56 people were trained, so it means, 22 person/week.

The feedback questionnaires from this pilot action together with photographs can be found is Appendices 5.3 and 5.7.

#### **Conclusions:**

From the feedback questionnaires the vast majority of the students found that the training objectives had been met. The positives from the pilot actions were knowledge about fuel cells and how they work, also other applications for the technology. However there were some who would have liked more practical based training.

#### 3.4 Pilot Action – FHa/FSV

San Valero Foundation is a non-profit organisation with more than 50 years of experience in initial, continuing and occupational technical-vocational training and has more than 3000 students per year. It has an educational agreement with the Government of Aragon and its commitment to innovation has led it to promote numerous pilot projects in an international level, related to the technical-vocational training linked to companies and its developments have been subject of several international awards.

FHa and FSV carried out an E-learning online training course from September to December 2012, including one day (practical) attendance at the Foundation of Hydrogen, Aragon.

#### E-learning platform:

#### Rational & Objectives:

- Understand the basic principles in terms of hydrogen (production, distribution and storage)
- Teach general concepts of architecture and components of FCEV
- Acquire the knowledge necessary for the maintenanceand repair of FCEV
- Establish basic knowledge in hydrogen and high voltage safety

#### Outline of pilot action:

- General concepts and history
- Vehicle architecture: components and type
- Component maintenance (HV-battery, electric motor, inverter, power electronics, etc)
- HV and hydrogen safety
- Vehicle examples
- Practical training (optional)

Group	Number of students
Automotive teachers	47
Automotive students	57
Other vocational training teachers	56
Other vocational training students	11
Automotive workers	27
Total	198

#### Results:

In five days equivalent (during two months, 25-30 hours), 198 people were trained, so it means, 198 person/week.

The feedback questionnaires from this pilot action together with photographs can be found is Appendices 5.4 and 5.8.

#### **Conclusions:**

From the feedback questionnaires the vast majority of the students thought the training satisfied their hydrogen training needs and also had the correct base of knowledge and was of interest. A large proportion would use the knowledge gained in their current and future job roles.

#### 4 Conclusions

The pilot actions highlighted in sections 3.1, 3.2, 3.3 and 3.4 with student feedback forms highlighted in appendices 5.1, 5.2, 5.3 and 5.4 were carried out by four different project partners in four different countries and showed the rational and objectives, the outline of the study, the method of delivery and the results. In total some 350 students (253 person/week) were trained in hydrogen and fuel cell technologies. The pilot studies have shown the versatility of the different modes of delivery, i.e. face-to-face training, E-learning and a combination of E-learning with practical 'hands-on' experience, and the potential opportunities that are available for training organisation. As hydrogen and fuel cell technologies become more commercial and applications increase its use there will be an increasing need for good 'short term' vocational training course on hydrogen and fuel cell technologies and these four pilot actions have shown that these are available and that there is a market even at the currently low use of the technologies. Apart from the modes of training delivery highlighted in the pilot studies there are also opportunities for the use of new technologies and methods of training, Deliverable D10 highlighted a number of these such as Just-in-time training, Interactive training, Use of 'Gamification' also smart phones, tablets etc.

In conclusion in the short to medium term there wil be an increasing requirement for 'short' vocational training as hydrogen and fuel cell technologies increase in usage. The four pilot actions have shown that these are available, are in demand and have proven to be successful as the conclusions from each pilot study has shown.

5. Başka hangi konuları ve/veya başlıklar eğitime dahil edilebilir (eğer gerek varsa)?
En başamlı zakilde sunulmuştur. Başka bir konuya gerek yoktur

6.Eğitimciler hakkında ne düşünüyorsunuz?: (1 = kesinlikle kötüydü, 6 = kesinlikle iyiydi)

ligili ve istekliler miydi?

Sorulan sorularla yeterince ilgilenildi mi?

Tartışma ve aktivitelere herkesin katılımı sağlandı mı?

Anlaşılabilirlik?

1 2 3 4 5 6

Anlaşılabilirlik?

 Lütfen bu eğitim sonunda kazandığınız bilgileri ve bu bilgilerin çalışma alanınızda performansınızı nasıl arttıracağını değerlendirin.

(1 = Zayıf fayda, 6 = Çok büyük fayda)

1 2 3 4 5 6

8. Eklemek istediğiniz yorumlar.

Ou projede biz öğreneilerinde birebir almasını istiyarum.

Canki bu geleceği alan bir proje alduğundan gelecek

neslinde buna yakınlık gestermesi ve inimle bulunması gerektiğine inaniyarım. Bu sayede proje daha kapsamlı

ve yeni filorlere acak alaeaktir.
